# Ensono Service Mapping

Unclear mapping of my IT Infrastructure

See everything in your infrastructure and its relationship with each application

What if you could see your entire IT infrastructure -from servers in the data center all of way down to individual applications? Service Mapping provides companies with accurate pictures and insights into performance, costs, and security data protection so that they may guide optimized infrastructure governance.

With Ensono's Service Mapping, you can stay up-to-date with what your application is doing without having any surprises come out your way.

The data output integrates into our service management platform, providing insights into application costs, performance and security.

According to Gartner, the average cost of an hour of downtime is **\$300K**.

## Challenges

**40%**

of racks are under provisioned

**28%**

of servers are ghost servers

With all of this wasted space in data centers, it is possible that managers could be able to shrink the size or even remove entirely

Save money on power usage when servers are used efficiently.

## Make better outcomes happen

Get continuously optimized view of services

Realtime management to desired state

Faster detection and remediate service issues

Improve root cause analysis

### Provides an ongoing continuous view into client infrastructure.

A complete on-going understanding of what's in your IT estate.

### Captures insights into application costs, performance and security.

Discovery and ongoing relationship mapping, and governance of all application services in your organization. This builds a comprehensive map of all devices, applications, and configuration profiles used across your infrastructure.

# Use Cases

## Faster application services remediation

### 01 **Get a clear picture of your application infrastructure dependencies to locate and fix issues in your data center quickly.**

Our discovery services will not only map and identify each application and its infrastructure dependences, it will show aggregate costs quickly enabling you with re-platform opportunities and costs savings.

## Greater Financial Governance

### 02 **I don't have clear line of sight on what each application costs me.**

With Ensono's Service Mapping, you will see the applications costs tied back to the business stakeholders giving you insight into how to best allocate costs across stakeholders for greater financial governance.

**You can't afford to take any chances with downtime, so make sure you have the proper mapping in place.**
