

Ensono's Approach to Mainframe Modernization

A hybrid model built for complexity, speed, and scale

Our hybrid service delivery model

Mainframe modernization isn't just a technical upgrade—and it's never one-size-fits-all. Ensono meets you where you are with a tailored engagement across a variety of platforms and environments, and we stay with you beyond project completion to deliver long-term value. Our hybrid service delivery model makes that support collaborative, flexible, and built to last. We're big enough to deliver, small enough to care, and agile enough to support what others won't.

We deliver projects together, with you

Embedded collaboration

We integrate our experts directly into your teams, working side-by-side to co-create solutions. This minimizes long handovers and enables better knowledge-transfer.

Centers of Excellence

We help you build internal capability through shared architecture, design, and technical best practices. This empowers your teams to lead future projects independently.

End-to-end partnership

Our hybrid service delivery model avoids the pitfalls of traditional delivery. We stay engaged, supporting continuity and long-term success.

Collaboration in action

Our collaborative approach to mainframe modernization comes to life through hands-on engagement, cross-functional alignment, and integration with your teams.

Workshops across business units

We engage stakeholders from across your organization to align modernization goals.

Integrated DevOps

We modernize mainframe environments using tools like Git and z/OS Connect, enabling API-driven innovation and seamless integration with cloud-native applications.

Third-party partnerships

With partners like IBM, Dell, AWS, GCP, and Azure, we enhance our modernization toolsets, allowing you to benefit from the latest technologies.

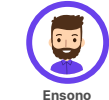

Handover with enablement

Every project includes documentation, operational training, and knowledge-transfer to deliver successful outcomes.

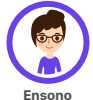

Hybrid delivery model spiral of knowledge

How Ensono transfers expertise and builds internal capability through hybrid teams.
