

Modernization is a Team Sport

Having the right ally on your side helps you achieve more wins, faster

Modernization is complex. Most organizations face talent gaps, legacy constraints, and mounting pressure to move faster. It's a lot for internal IT teams to manage alone, which is why [95% of enterprises](#) rely on partners to advance their IT modernization efforts.

The problem is, not all partnerships deliver. Too often they feel transactional and impersonal, focused on KPIs instead of outcomes.

At Ensono, we take a different approach. We call it relentless allyship: a commitment to not only managing sophisticated IT, but elevating it. It means putting your priorities first, operating as an extension of your team, and delivering outcomes that matter to your business.

Why allyship matters

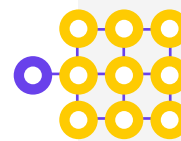

Modernization is about more than technology. It's also about people and partnerships. Nearly all organizations need external support to close skills gaps, add structure, and keep progress on track. That's where an ally makes the difference: someone who brings expertise, frameworks, and flexibility to help you move faster without disruption.

Modernization by the numbers

95%

of organizations work with at least one third-party partner to modernize

9 in 10

organizations report at least one talent gap slowing progress—most often in cloud architecture and migration

35%

of organizations say clearer roadmaps and execution strategies would most accelerate their efforts
