

# Ensono Remote Hosted Mainframe Service

Expert management. Zero migration. Near-instant savings.

Managing mainframe infrastructure shouldn't force you to choose between cost, control, and operational risk. Many organizations want to reduce mainframe expenses and explore outsourcing options but don't want to – or aren't ready to – commit to a full data center migration. At the same time, the workforce that maintains your mainframe may be reaching retirement, leading to uncertainty around who will update and maintain the hardware, software, and licenses that power your most critical systems.

**Ensono's Remote Hosted Mainframe Service** transforms mainframe management while your infrastructure stays put—with a clear path forward. Through a Mainframe-as-a-Service (MFaaS) delivery model, we assume ownership of your mainframe in your data center. You realize immediate cost reductions and operational improvements, while maintaining full optionality to transition into Ensono's data center if needed in future.

## How It Works

- Transfer & optimize**  
 Ensono takes over day-to-day, end-to-end mainframe management, while the equipment remains on site.
- Manage & monitor**  
 Our experts use proven tools and standardized processes to remotely operate your systems with secure, seamless connectivity.
- Scale & evolve**  
 Shift from CapEx to OpEx and leverage the continuous improvements driven by mainframe automation and best practices.

## Business impact

### Ensono helps you...

### So you can...

**Reduce costs**

Achieve a significant reduction in total mainframe operations costs almost immediately through software savings, labor efficiencies, flexible service options, and optimized processes.

**Eliminate skills gaps**

Access a shared global staffing model built from proven recruiting channels and Ensono's Mainframe Academy.

**Accelerate time-to-value**

Launch services quickly with no physical migration required, significantly reducing upfront costs and transition risks.

## Why Ensono

### Deep mainframe expertise

We have a decades-long track record of delivering significant mainframe improvements with economical staffing models and proven tools trusted by enterprises worldwide.

### Flexible delivery models

Choose from three MFaaS options (Fully Managed Hosting, Remote Hosted, or Remote Infrastructure Management or combination over time) based on your specific requirements.

### Unique Mainframe Academy

We're continuously investing in mainframe talent through our Academy and partnerships with educational institutions.

### Economies of scale

Our software purchasing power and operational efficiencies are designed to reduce your costs.

### Keep your mainframe. Gain expert management.
